

Capital Management Firm Enhances Asset Security

FACTS AT A GLANCE

INDUSTRY

Finance

SOLUTIONS

FireEye Network Security

FireEye Endpoint Security

FireEye Email Security

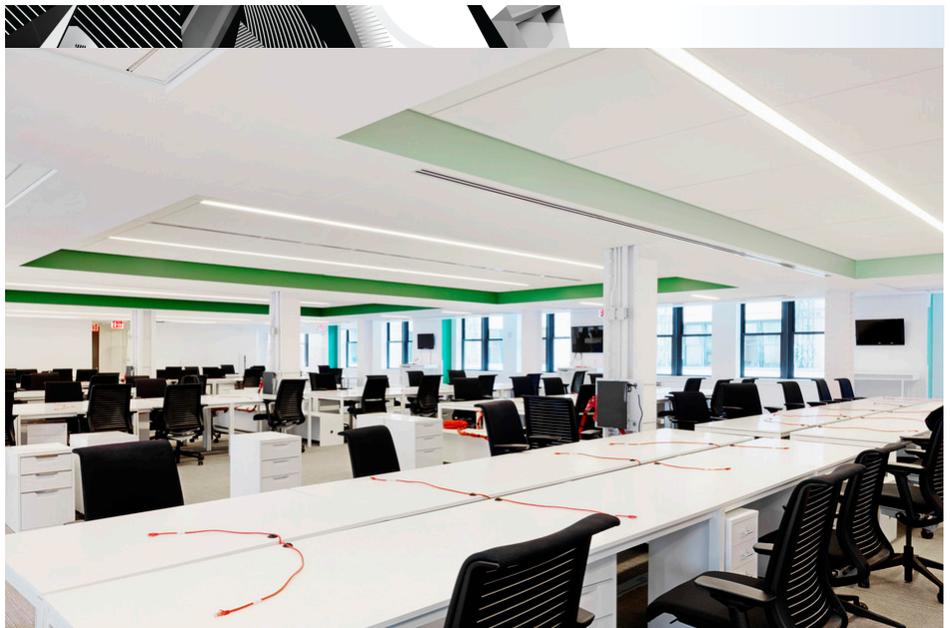

FireEye Managed Defense

BENEFITS

Global intelligence leveraged to provide comprehensive local protection

No need for extensive internal resources to secure infrastructure

Detection of threats automatically triggers remediation process

CUSTOMER PROFILE

This capital management firm works primarily with companies in the biotech and healthcare industries and holds assets under management totaling hundreds of millions of US dollars.

Importance of Cyber Security

As the number of data networks, digital applications and internet and mobile users grows, so do the chances of cyber exploitation and online crimes. Today, with a security breach being just one click away, it is vital for every business to safeguard its assets. Perpetrators range from nation-state hackers and disgruntled employees to organized crime units and even activists.

For a company that truly cares about protecting the assets of its investors – both data and money – mitigating the risk of cyber attacks is fundamental to this capital management firm. The chief compliance officer shared, “There are always threats and you don’t know when they will materialize. We must be prepared to respond when someone attempts to breach our infrastructure. All we’re really doing is playing defense. We wanted to invest in technologies that enable us to proactively prevent and mitigate this risk.”

“We believe FireEye offers the most in-depth suite of solutions from an intelligence standpoint, as well as a threat protection perspective.”

— Chief Compliance Officer, Capital Management Firm

Building a Secure Foundation

In assessing cyber security alternatives, the chief compliance officer considered both investing in in-house IT resources or outsourcing its security operations, and stated, “After we researched all the alternatives, we became very comfortable entrusting the analysis and remediation of cyber threats to FireEye: We believe FireEye offers the most in-depth suite of solutions from an intelligence standpoint, as well as a threat protection perspective.”

The company implemented FireEye Network Security, FireEye Endpoint Security, FireEye Email Security, and FireEye Managed Defense.

Protection Against Costly Breaches

With FireEye Network Security, the firm proactively screens and blocks malware hiding in Internet traffic. FireEye Endpoint Security detects, prevents, and responds to malware and threats often missed by traditional anti-virus products. FireEye Email Security preemptively inspects and blocks emails in real-time for behavioral anomalies and Trojan horse attachments to thwart attacks. FireEye Managed Defense acts as the firm’s intelligence team, providing real-time visibility into evolving threats and managing the remediation process should it become necessary.

“The FireEye Managed Defense team is so essential to our cyber security landscape,” asserted the chief

compliance officer, “We are delighted that we have such a robust partner like FireEye to help take care of our entire infrastructure.”

Expert Knowledge Prompts Peace of Mind

Backed by its FireEye suite of solutions and services, the chief compliance officer has confidence in the firm’s cyber security posture, and explained, “With FireEye, I know that we are part of a worldwide data-gathering network. When a zero-day offensive is launched – even if it’s not specifically targeting the financial sector – we instantly receive notification from FireEye and are positioned to protect ourselves.

“I’m able to track the progress and see which techniques the FireEye experts are using to process information and conduct analysis. It makes us feel better that we are not just one firm out in the world waiting to get breached; there’s a whole host of environments around the globe that are connected from a data intelligence standpoint to help guide the decisions that are being made.”

The chief compliance officer concluded: “FireEye has data like no other organization. I know that if there’s a threat actor thinking about breaching us, FireEye most likely already has information about who they are, what they want, and how to stop the situation from happening. I am comfortable knowing that the experts at FireEye will notify me before any sort of breach or threat gains traction.”
