31% of cyber crime starts with email, and it only takes one to infiltrate your organization.

90% of malware threats are delivered via email.

65% of reported cyber attacks are delivered via email.

$12.5B+ in annual business losses due to email.

46% of global ransomware attacks begin with email.

Ransomware damages reached $5 billion in 2017.

Eliminating Threats

58% identified threats from external sources.

10% identified threats from internal sources.

32% identified threats from third party sources.

Adapting Attacks

More cyber criminals are using malware to attack their targets, which can accelerate or delay the detection of an attack. This can be achieved through email, social media, or other channels.

With email security solutions focused on detecting malicious cyber criminals are adapting their attacks, exposing organizations to malware-less assaults such as CEO fraud.

Working with partner organizations to improve email security is a key strategy for reducing the impact of cyber attacks.
