ENDPOINT SECURITY
From Prevention to Remediation

Comprehensive Endpoint Security
As endpoints proliferate, and the bring-your-own-device (BYOD) mentality becomes more pervasive, organizations face rapidly increasing security risks. Older endpoint protection platforms (EPPs) use static blocking to keep out known threats. But as attackers have become more sophisticated, and as more unknown threats emerge, static blocking has become less effective. Newer EPP solutions, often labeled “next-generation endpoint security,” need to be able to identify threats of all types, including advanced endpoint detection and response (EDR) capabilities.

Maintaining a high quality security system is only continuing to be more and more complex.

The quantity of undifferentiated alerts from static defenses can overwhelm security teams.

An attack may achieve its goal in the time it takes a human to evaluate and respond to it.

Automated solutions can accelerate effective responses.

Intelligence provides alert context to respond to genuine threats.

Multiple adaptive defenses address evolving tactics.

Scalable on-premise, cloud and hybrid deployments can help provide protection in your network environments.

Endpoints can be a part of difficult-to-identify, multi-vector, blended attacks.

Attackers rapidly test and refine their attacks to evade defenses against known threats.

Diverse and evolving security architectures require flexible endpoint solutions.

From Prevention

To Remediation

As endpoints proliferate, and the bring-your-own-device (BYOD) mentality becomes more pervasive, organizations face rapidly increasing security risks. Older endpoint protection platforms (EPPs) use static blocking to keep out known threats. But as attackers have become more sophisticated, and as more unknown threats emerge, static blocking has become less effective. Newer EPP solutions, often labeled “next-generation endpoint security,” need to be able to identify threats of all types, including advanced endpoint detection and response (EDR) capabilities.

It’s time to prepare your EPP for new threats and risks.

It’s time to prepare your EPP for new threats and risks.
