Network Security to Combat Threats in Rapidly Changing Organizations

**THREAT LANDSCAPE**
Breach attempts are evasive, stealthy, frequent and costly.

- **$4M** The average cost of a data breach is significant.
- **320 DAYS** 80% malware is targeted and often is not even understood for months.
- **80%** Intrusion attempts and malware remain undetected for months.
- **780%** 80% alerts are unreliable and generated in numbers that overwhelm security teams.

**IT TRANSFORMATION**
Business-driven IT transformation expands the organizational attack surface.

- **+40%** Migration to public cloud applications requires networks that must be protected.
- **96%** Non-Windows devices supported by 96% of organizations today are often less well protected than Windows devices.
- **40%** Branches adopting direct-to-Internet links increase exposure to attacks outside the well-protected headquarters.

**FOUR REQUIREMENTS OF NETWORK SECURITY**
Organizations can minimize the risks of costly cyber breaches with the right network security solution.

1. **Rapid Incident Response**
2. **Real Time Detection and Blocking**
3. **Consistent Level of Protection Across Locations and Devices**
4. **Scalable and Flexible Deployment Models**

**OUTCOMES FROM THE IDEAL NETWORK SECURITY SOLUTION**
Identify and build the right network security solution for your needs.
