

1+1=3

FireEye Network Security
+ Email Security

You may be well protected against web attacks, but what about blended or multi-vector attacks that come at your network through email as well as the web?

ARE YOU PROTECTED FROM ALL SIDES?

91%

of all cyber crimes start with email¹

84%

of organizations have been spear phished²

Highly selective attacks

Spear phishers mean business, targeting their emails to specific users baiting them with a request to wire funds or click on a URL that is a credential phishing site.

FIREEYE'S POWER DUO

Better together

FireEye Email Security is a powerful addition to the FireEye Network Security solution for fighting malware, URL and impersonation-based attacks initiated through the email vector.

FULL-COVERAGE PROTECTION

An estimated 90% of all attacks play out over both email and the web³. With odds like these, it's critical to protect your organization from every entry point.

PREPARED FOR ANY THREAT

Just like a radar system that provides 360-degree views or sonar that detects sound from any direction, FireEye Network Security + Email Security give your organization a heightened awareness.

1+1=3

Working together, FireEye Network + Email Security correlate activity across web and email traffic for richer alerts and a broader view. In turn, your team can quickly set priorities and implement a response.

Used together, FireEye Network and Email Security immensely improve your security posture. With flexible deployment options, they will nimbly evolve as your business infrastructure and needs change.

WITH NETWORK SECURITY + EMAIL SECURITY, YOU CAN:

Detect emails with suspicious URLs

See the big picture to guard against blended attacks

Identify top alerts to respond faster and more effectively

Block attacks by impersonators

Stretch security budgets, reduce security stack vendors
