Security Advisory

October 5th, 2017

Executive Summary:

FireEye has issued a set of FireEye Operating Systems (FEOS) updates for the following products: AX. Additionally, FireEye has issued security updates to our operational infrastructure and applications. These updates contain a number of vulnerability fixes credited to researchers other than FireEye.

Recommendations:

FireEye encourages all customers to update their systems to the latest released version where noted below. FireEye has issued maintenance releases and fixes for all security issues contained within this advisory.

FireEye Label: Added rules to protect the AX when using proxy live mode and live mode
Credit: Andreas Dewald of ERNW
Severity: High
Products Affected: FireEye AX
Description:
A vulnerability existed that allowed a sample to communicate with the network services of the FireEye device with using live mode.

We appreciate the support of the security researcher community and encourage responsible disclosure of any potential security issues. We encourage all FireEye customers to leverage security best practices (provided below) where possible in their environments to continue to limit security risk exposure.

**FireEye Security Best Practices**

- Always keep the product version up-to-date
- Limit network access to the management interface(s) of the appliance with firewalls or similar measures
- Only issue accounts to trusted administrators
- Utilize strong passwords
- Monitor logs
- Restrict physical access to the appliance to trusted administrators

To report vulnerabilities in FireEye products, please send an email to security@FireEye.com.
